Content SEO Updates

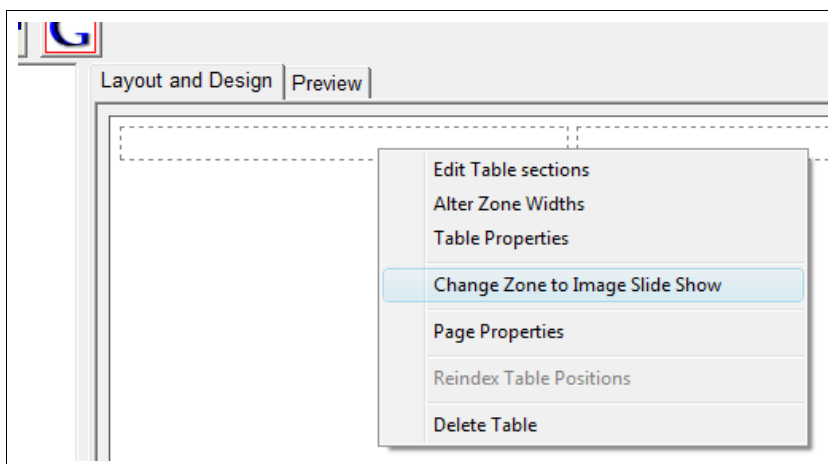

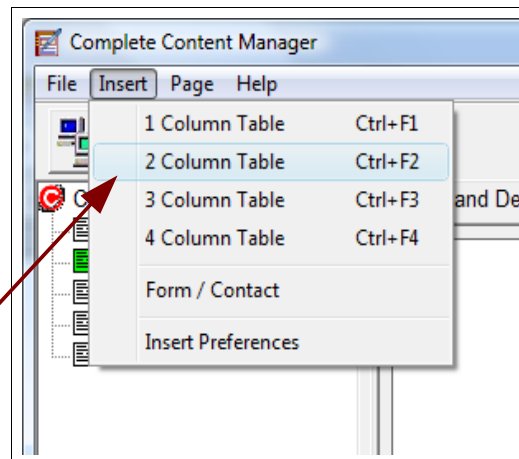

General updates to the algorithms and fixes to errors in the reporting engine.

Content Image Slide Shows

For detailed information and how to Create a flash like image slide show from selected web images please visit the Complete Web website and click on the link to the online videos.

How to create an Image slide show

Within the content module, insert a 1,2,3 or 4 column table.

Right click the zone where you would like to place the image slide show.

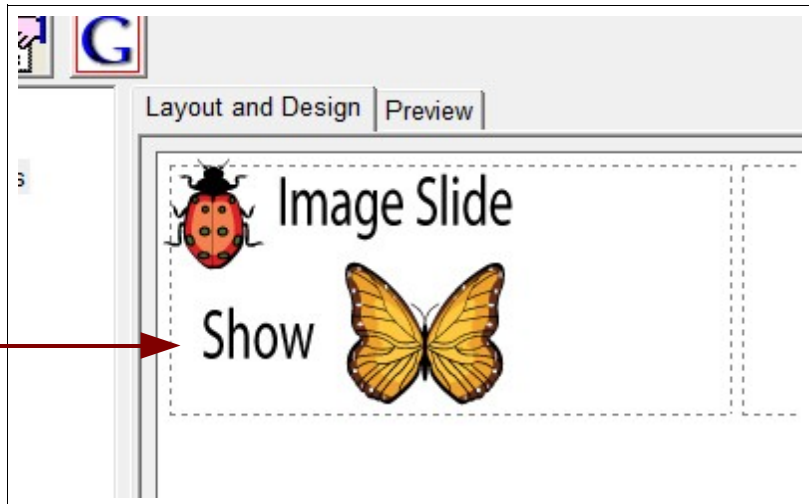

From the popup context menu select “Change Zone to Image Slide Show”

You can convert any zone to a slide show and you can convert a slide show back to a text zone.

To add images to the slide show double click the Image slide show zone.

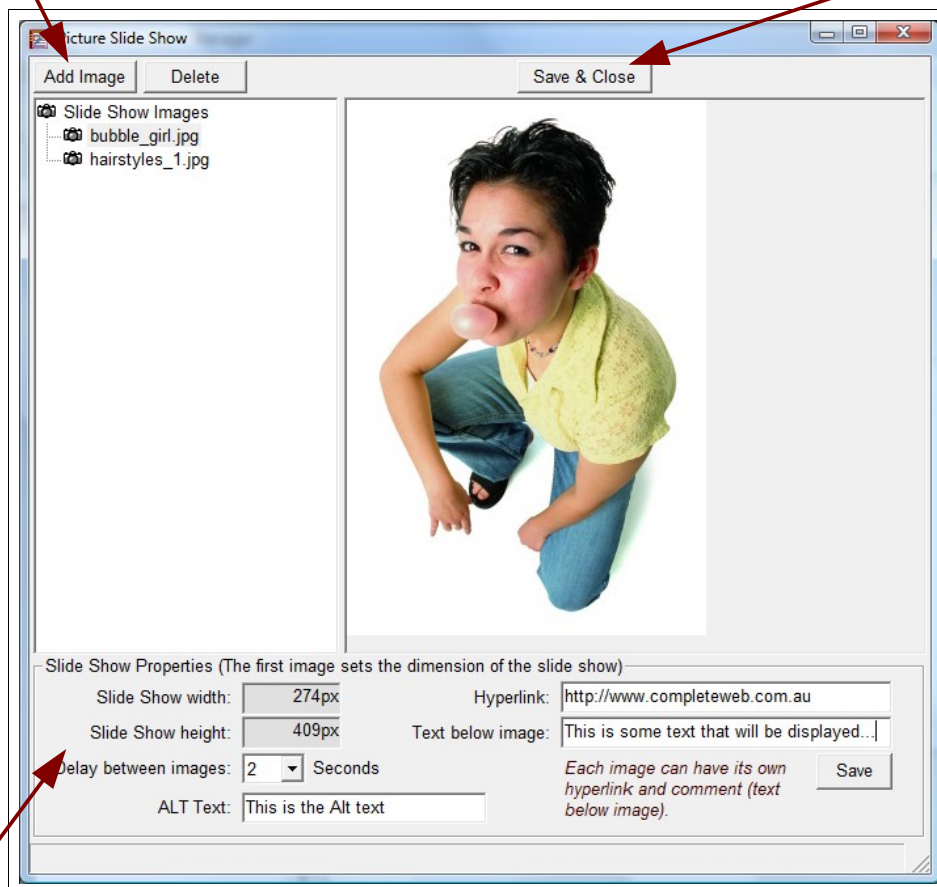

You can have multiple slide shows on each page – each slide show will be displayed using this image. In the “Layout and Design” view

You can preview the slide show in the “Preview” tab

Use this button to add images.

When complete click this button.

This is where you set the properties for the slide show.

Note: the first image sets the dimensions of the entire slide show, that is, whatever the dimensions are for the first image, all other images within the selected slide show will be resized to that width and height.

Note: Hyperlinks and comments will only work if the first image has the corresponding values set, that is, if you have not set the comments on the first image, then NO comments will be displayed regardless of comments being set in the other images.

Deleting the images

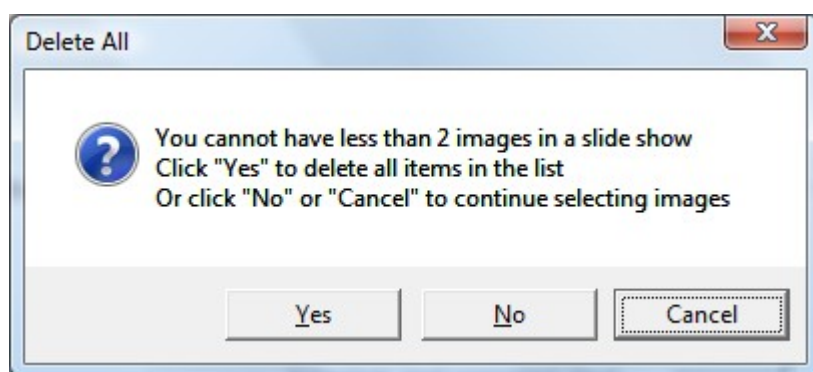

Click the delete image button from the top of the window.

Note: you cannot delete the first image in the slide show.

Deleting the slide show

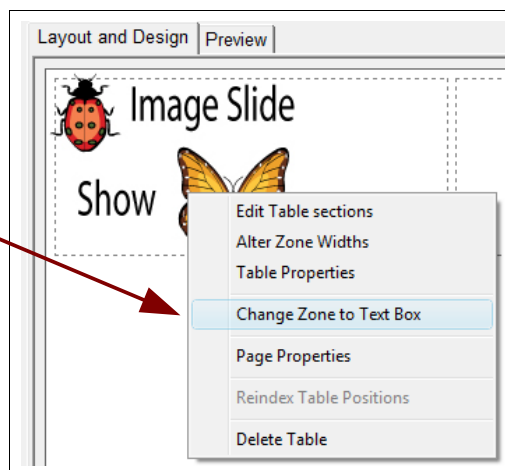

Delete all the images as above then click the “Save & Close” button

You will be prompted with the following message

Selecting “Yes” will remove the images from the slide show.

To change the Zone back to a text zone, right click the slide show image in the “Layout and Design” window and select “Change to Text Box”
